TOWN OF WILTON MITIGATION ACTION PLAN

Geography/History

Wilton is located in the southwestern section of the County and approximately 40 miles south of Birmingham. Before Wilton received its present name around the turn of the century it had been known by seven different names since the area was first homesteaded in the early 1800's. The first settlers, who were farmers of Scotch-Irish descent, who came down from the Carolinas, called it Woodsborough. The spelling was later changed to Woodsboro. In 1818 Jonathan Ware built a forge at Thompson's Mill, located just south of the town and it was here the first iron in the county was made. Wrought iron pipes were made at the mill and water pumped through them to the nearby homes, making it the first place in the county to have running water

Known primarily as a railroad town, it is assumed the community was finally named after Wilton, England, which is also a railroad center. An 1856 timetable of the Alabama and Alabama River Railroad lists it simply as Woods. Tram lines built in 1850 enabled coal from local mines to be hauled to the railroad and loaded on cars of this time. The town became known as Junction in 1872 and was later changed to Birmingham Junction in 1889 when the tracks of the Selma, Rome and Dalton Railroad and the Brierfield, Blocton and Birmingham Railroad came through. The town was next called Bismarck after the German chancellor. During World War I the name became unpopular and was changed to Catoosa after a town in Georgia.

Repair shops were located here to fix engines, boilers, etc. A long time resident of the town said he recalled seeing as many as 12-15 engines in the shop at one time. When the shop was moved to Selma, the town lost some of its prosperity as the population declined.

The town was incorporated in 1918 and the first mayor was L. McMilian whose daughter, Mrs. Sam Vest, was postmaster for many years. The city hall, which is still used, was built in 1934 when L. Cochran was mayor.

Capabilities

The Legal and Regulatory Capability survey documents authorities available to the jurisdiction and/or enabling legislation at the state level affecting planning and land management tools that support local hazard mitigation planning efforts. The identified planning and land management tools are typically used by states and local and tribal jurisdictions to implement hazard mitigation activities. If the jurisdiction does not have this capability or authority, does another entity/jurisdiction have this authority at a higher level of government (county, parish, or regional political entity), or does the state prohibit the local jurisdictions from having this authority?

The Administrative and Technical Capacity survey documents personnel employed by your jurisdiction and the public and private sector resources that may be accessed to mitigate hazards in the community. For smaller jurisdictions with limited capacities, no local staff resources may be available for many of the categories. If so identify public resources at the next higher level of government that may be able to provide technical assistance to the community.

For some hazard mitigation actions, consider federal agencies that provide technical assistance, such as the U.S. Department of Agriculture (USDA) Cooperative Extension Service, which has offices in most counties. The planning team in rural communities must be creative in identifying outside resources to augment limited local capabilities. This information will be used when evaluating alternative mitigation actions and when preparing your mitigation.

Multi-Jurisdictional Mitigation Actions

The actions listed in each jurisdiction’s Mitigation Action Plan serve as an easily understood menu of mitigation policies and projects for local decision-makers who want to quickly review their jurisdiction’s respective element of the countywide Plan. In preparing the individual MAP’s, each jurisdiction considered their overall hazard risk and capability to mitigate identified hazards as recorded through the risk and capability assessment process and to meet the countywide mitigation goals and the unique needs of their community.

Each jurisdiction participating in this Plan is responsible for implementing specific mitigation actions as prescribed in the adopted Mitigation Actions. In each Mitigation Action Plan, every proposed action is assigned to a specific local department or agency in order to assign responsibility and accountability and increase the likelihood of subsequent implementation. This approach enables individual jurisdictions to update their unique mitigation strategy as needed without altering the broader focus of the countywide Plan. The separate adoption of locally specific actions also ensures that each jurisdiction is not held responsible for monitoring and implementing the actions of other jurisdictions involved in the planning process.

Mitigation Actions Prioritizing

Prioritizing mitigation actions for each jurisdiction was based on the “STAPLEE” process. “STAPLEE” uses multiple factors under the categories of Social, Technical, Admistration, Legal, Economic and Environment. The original STAPLEE factors have been modified to enhance the prioritization process. The enhancements include adding life, property and economic items to the Social category and implementing weighting factors to Social and Economic

categories. A weighting factor of 3 is used for loss of life and a weighting factor of 1 through nine is used for Economic impact of the hazard occurrence. A weighting factor of 2 is used for cost/benefit items. The table used for prioritization is at the end of this section.
